Let's look at some January highlights.

But first...the cartoon.

The Cloud Roundup: January's Key Stories

- **"Hybrid Cloud Market Growth Forecast,"** with the market valued at $194 billion in 2026 as enterprises increasingly adopt flexible cloud architectures combining on-premises infrastructure with public and private cloud, driven by workload portability, cost optimization, and compliance with regional data regulations, from Mordor Intelligence.
- **"Top 5 Trends Shaping Managed File Transfer (MFT) in 2026,"** covering AI-driven automation, enhanced visibility and analytics, cloud deployment flexibility, and the growing importance

of compliance centralization for enterprise file transfers, from Systech.

- **"Under Armour Ransomware Breach: Data of 72 Million Customers Appears on the Dark Web,"** after the Everest ransomware group claimed responsibility for a November 2025 attack, with stolen data now circulating across hacker forums, a class action lawsuit alleges negligence in data protection, from Malwarebytes.
- **"7 Cloud Computing Trends for Leaders to Watch in 2026,"** highlighting AI optimization, rising compliance regulations, including the EU AI Act and new state laws, and cloud costs becoming the #2 IT expense for many organizations, from InformationWeek.

SFTP Gateway: The secure, air-gapped alternative to Files.com

If you're evaluating Files.com, it's worth considering the trade-offs.

As a pure SaaS solution, your data sits on their infrastructure. That means your data is internet-facing, with no option to air-gap. For organizations with strict security requirements, that's a non-starter.

SFTP Gateway and StorageLink deploy in your own cloud environment, giving you **full control over security, compliance, and costs**.

Speaking of costs: a typical 100-user setup runs about $17,500/year with Files.com versus under $4,600 with SFTP Gateway.

🚀 Coming Soon: Containerized SFTP Gateway

Containerized SFTP Gateway

We're excited to announce that SFTP Gateway will soon be available as a containerized application, giving you the flexibility to deploy on Docker, AWS EKS, or Google Kubernetes Engine.

Why containers? Our customers asked for deployment options that fit modern cloud-native infrastructure. Soon you'll be able to spin up SFTP Gateway with a single Docker Compose command, integrate it into your existing Kubernetes clusters, or run it locally for testing and development.

Deployment options will include:

- Docker Compose templates for AWS, Azure, and GCP
- Kubernetes manifests for EKS and GKE Autopilot
- Full multi-cloud storage support that connects to S3, Azure Blob, or Google Cloud Storage

This is a great fit for DevOps teams managing containerized workloads, organizations running hybrid or multi-cloud environments, or anyone who wants more deployment flexibility.

In Case You Missed It

We've been busy on the blog. Here's a quick look at what we've published recently:

- **"StorageLink: Enterprise-Grade Data Transfers for the Modern Cloud"** – Enterprise customers are approaching us with a specific need: replacing legacy managed file transfer systems, such as IBM Sterling Connect:Direct. We break down how StorageLink delivers modern, cloud-native file transfers without

the complexity. Read more

- **"Faster SFTP to Cloud Uploads and More with SFTP Gateway v3.7.4"** – Our latest release delivers 3x faster SFTP uploads to Amazon S3, Azure Blob Storage, and Google Cloud Storage, along with local storage support. Read more
- **"What AWS Interconnect – Multicloud Means for Enterprise File Transfer"** – AWS recently announced a new service creating private, high-speed connections between cloud providers. We explain what this means for organizations moving files across AWS, Azure, and Google Cloud. Read more
- **"Azure Blob Storage SFTP vs SFTP Gateway: Complete Comparison for Azure SFTP"** – Azure now includes native SFTP support, but dedicated solutions like SFTP Gateway often deliver superior security, manageability, and operational efficiency. Here's how they compare. Read more
- **"The Hidden Costs of Legacy MFT Systems"** – If your file transfer costs keep climbing while your flexibility keeps shrinking, you're not alone. We explore why legacy MFT solutions are becoming expensive liabilities. Read more
